#### Job responsibilities

---

As an Electrician you will be required to work unsupervised in remote geographic locations and be accountable for the completion of planned and reactive electrical tasks within agreed time-scales, quality and cost parameters. Candidates will be expected to manage and prioritise your own workload effectively and to build and maintain relationships with operational customers, colleagues, suppliers and contract partners. Adhering to the Health and Safety policy and standards actively identifying hazards, providing mitigation and reporting onto the company hazard database to ensure the cause of the hazard is removed.

You will be required to supervise approved Contract Partners, providing risk assessments and method statements where permit to work is required for a given task. You will also be required to use a Toughbook to capture all work activity and job status in line with work flow processes. Assist in the development and training of apprentices as well as less experienced members of the team, identifying ways to improve the value and service delivered by the Maintenance Function. Installation & commission new plant and equipment to relevant standards is essential. Diagnosing and repairing faults on systems and plant.

You will pro-actively identify and report follow on work or areas for enhancement. You will conduct your own risk assessments and create appropriate method statements when required to safely carry out maintenance activities. The successful candidate will have the ability to specify parts and equipment required for procurement as part of day to day role. As part of this role, you will be required to participate in a stand-by rota, covering your base and any other areas when required.

This will typically be 1 week in 7.
